

01 THE HUMAN CONDITION

Location: Los Angeles, California

Square Footage: 60,000SF

Year: Spring 2023

The Interactive Children's Museum on Climate Change and Sustainability is a dynamic educational space divided into three sectors, dedicated to environmental science, climate change, and sustainability. Through interactive exhibits, students explore the evolving climate and effective mitigation strategies. The ground floor is transformed into an open, interactive park, extending learning opportunities to the wider community, even those who choose not to enter the museum. This project bridges architecture, education, and environmental stewardship, fostering a vital connection between knowledge and action.
